

Renal

ACROSS

- 2 Treatment used in the event of kidney failure
- 6 Branch of the renal artery that comes out of the glomerulus
- 7 Abbreviation for nephron tubular branch located nearest the renal corpuscle
- 10 Small tube that carries urine from renal pelvis to bladder
- 11 Last passageway for flow of urine
- 12 Hormone that interacts with the distal convoluted tubule and increases sodium reabsorption

DOWN

- 1 Urine manufacturing mechanism that occurs in renal corpuscle
- 3 Abbreviation of enzyme that converts angiotensin
- 4 Fluid pushed out of glomerulus into Bowman's capsule
- 5 Functional unit of kidney
- 8 Outerregion of kidney
- 9 Movement of substances from blood into the filtrate
- 13 Movement of substances from filtrate into blood

- 14** Hormone that causes water to be removed from the cortical collecting duct when BP is low
- 16** The renal corpuscle of the kidneys consist of a cluster of capillaries called the _____
- 18** Organ that temporarily stores urine
- 22** Branch of the renal artery that comes into the glomerulus
- 24** The space that houses the kidneys, ureters, and abdominal aorta
- 25** Hormone released from renal cells in response to falling glomerular blood pressure
- 26** Inner region of kidney
- 15** Loop of _____
- 17** Opening of urethra; urinary _____
- 19** Medication that interacts with the loop of henle to increase urine production
- 20** Abbreviation that describes the how much filtrate goes through the glomeruli
- 21** Convoluted tubule that is responsible for majority of reabsorption
- 23** Filtrate does not contain proteins and _____

Note: For a fee, you can use Crossword Weaver to print a nice copy of this puzzle (one that doesn't look like a web page). You can check it out for free by downloading the demo from www.CrosswordWeaver.com.
